

EVI ICS-200B, DS-200-DL PCS HARDWARE

EVI offers a complete line of hardware accessories to assist in installing and add to the convenience of your EV Power Control Station (PCS).

EVI / MagneCharge Gen 2 Bracket

This bracket will adapt EVI's pedestal to accommodate mounting GM's inductive Gen 2 unit on EVI's standard pedestal. Conductive and Inductive units on the same pedestal will reduce installation costs and allow for transition to the conductive standard as the EVI pedestal will mount to the GM bolt pattern.

Locking Connector Enclosure

EVI's Connector Enclosure keeps your connector safe from the elements. Can also be fitted with a locking button release if needed.

EVI Pedestal and Cord Retraction

EVI offers a standard pedestal for free-standing installations. The unit can be mounted with EVI's standard bolt pattern or the standard GM MagneCharge bolt pattern. The pedestal can be mounted with one or two EVI DS-200-DLs or ICS-200Bs.

EVI's pedestal extension with cord retraction kit is offered either as a free-standing pedestal or as a retrofit to existing EVI installations, manages up to four cables and connectors keeping them off the ground and up out of the way, has a surface for signage and is delivered ready for a courtesy light of your choice.

All of EVI pedestal products are configured to accommodate 120V outlets for NEV charging.
