

LSV-100 Electric Vehicle Service Tool

The LSV-100 Electric Vehicle Service Tool (EVST-100) when used in combination with an LSV-100 EV Opportunity Charger provides service personnel the flexibility of quickly and easily charging low speed electric vehicles that have not yet been setup for fast charging. Ideal for Service Garages, recharging electric vehicles in under 60 minutes provides added service flexibility in your operation including returning the vehicles to the customer fully charged in a timely manner and providing more space in and around the shop by quickly charging the vehicles and moving them to the customer pick-up location. This eliminates long extension cords and hours of time on the charger (typically requiring an overnight charge).

Features of the EVST-100 include:

- Includes BIW/ITT Cannon 9-Pin, 100Amp Receptacle to interface with LSV-100
- Polarity Protection
- Heavy-duty Battery Clamps (standard) or Lugs upon request
- Lightweight and easy-to-use design
- LED Indication

CHARGER SPECIFICATIONS
